Edward Jiménez M.

Senior Software Engineer · Cloud, Backend & AI Agents
eddy@eddyjim.com | https://linkedin.com/in/eddyjim | https://github.com/eddyjim | Bogotá, Colombia

Summary

Senior software engineer with 10+ years building cloud-native systems on AWS. Currently embedded with BriteCore (insurance SaaS), shipping event-driven services, a state-machine billing engine and an AI agent that summarizes policy data. Earlier: led the design and implementation of a serverless LTI service that decoupled the Blackboard LMS monolith, and built the PoC seeding an MVC monolith-to-microservices migration at Alkanza. Builds LLM-backed tooling end-to-end: MCP servers, multi-agent harnesses on LangGraph, and Langfuse-instrumented evaluation, delivered spec-first. Strong in Python and full-stack with Vue/React.

Stack

Languages: Python, Java, JavaScript, TypeScript, Ruby, Bash, Scala
AI & LLM Tooling: Claude / Claude Code, Cursor, OpenAI Codex, Langfuse
Agent Engineering: MCP server design, Multi-agent orchestration, LangGraph (state graphs), Agent harness design, Spec-driven development
Backend Frameworks: Flask, FastAPI, Starlette, Falcon, Express, Rails, Spring Boot
Frontend Frameworks: React, Vue, Angular, Astro, Bootstrap, Material
Databases: PostgreSQL, MySQL, MongoDB, Oracle, SQL Server
DevOps & CI/CD: Docker, Kubernetes, GitHub Actions, Jenkins, Terraform
Cloud (AWS): AWS Lambda, EC2, ECS / Fargate, API Gateway, S3, DynamoDB, Step Functions, CodeBuild, Kinesis, CloudWatch / X-Ray, Tray.io
Tools: Git, Figma, Postman, JIRA

Experience

Fullstack Software Engineer
Team International — BriteCore (staff augmentation)
Jun 2022–Present | Remote

Staff augmentation engineer embedded with BriteCore, a SaaS platform for insurance policy management. Fullstack engineer building new product features — including AI agents — and operating cloud-native services on AWS as part of a US-based product team.

- Built an AI agent that produces summarized views of insurance policies, reducing the time end users spend on manual policy lookups
- Co-built a new state-machine-driven billing engine for the policy billing lifecycle
- Built an event producer that fans BriteCore domain events to internal and external event engines, enabling near-real-time downstream consumers
- Refactored legacy services and shipped new APIs across the BriteCore platform; upgraded internal tools from Python 2 to Python 3

Tech: Python, JavaScript, TypeScript, Vue, React, AWS, Docker

Technical Lead
Blackboard
Feb 2020–Jun 2022 | Remote

Technical lead of the Development and Relations teams. Owned the design and implementation of a new LTI service that decoupled functionality from the legacy monolith inside the Blackboard LMS.

- Designed and implemented a new serverless LTI service that decoupled functionality from the LMS monolith
- Migrated LMS integration to a serverless stack using AWS Cloud Services
- Built deployment pipelines for the new serverless infrastructure

Tech: Python, Java, Scala, JavaScript, Angular, React, AWS Lambda, API Gateway, DynamoDB, Step Functions, Docker

Senior Software Engineer
Alkanza
Jan 2018–Dec 2019 | Bogotá, Colombia

Fullstack engineer on the research and development team. Built proofs-of-concept while contributing to the platform's monolith-split project — migrating a fintech MVC monolith to event-driven cloud architecture.

- Built the initial proof-of-concept that validated migrating to an event-driven cloud architecture
- Contributed to core services in the monolith-to-microservices rollout

Tech: Python, Java, AWS, Docker, Kubernetes, PostgreSQL

Software Architect
Banking Technologies Solutions S.A.S
Mar 2016–Oct 2017 | Bogotá, Colombia

Software architect of a BPM implementation built on Bizagi. Owned the design of business processes and their integrations across enterprise banking systems.

- Established architectural patterns adopted across multiple projects

Tech: Bizagi, Java, Spring Boot, Oracle, SQL Server

Oracle EBS Solution Architect
Hardnetics LTDA
Nov 2015–Mar 2016 | Bogotá, Colombia

Hired to define the architecture and technical design of an Oracle E-Business Suite implementation for a telecommunications company.

- Delivered architecture and design artifacts for the EBS implementation

Tech: Oracle EBS, Java, Oracle, SOA

Senior Consultant
Fussion Corporation SAS
Mar 2015–Nov 2015 | Bogotá, Colombia

Senior consultant leading a content management (ECM) implementation and its integration with the client's ERP system.

- Delivered the ECM implementation and ERP integration on schedule

Tech: Java, JavaScript, Oracle, SQL Server

Functional / Technical Consultant
Soaint SAS
Jan 2013–Mar 2015 | Bogotá, Colombia

Functional and technical consultant on government projects and engagements across multiple economic sectors.

- Successfully delivered multiple client projects across government and private sectors

Tech: Java, JavaScript, Oracle

Projects

Insurance Policy AI Agent
Built an AI agent on the BriteCore SaaS platform that produces summarized views of insurance policies, reducing the time end users spend on manual policy lookups.
Tech: Python, LLM, AWS, FastAPI

Serverless LTI Integration
Migrated LMS integration to a serverless stack using AWS Cloud Services, including the deployment pipelines. Enabled scalable, cost-effective integration between learning management systems.
Tech: AWS Lambda, API Gateway, DynamoDB, Step Functions, Python

Monolith Split
Built the proof-of-concept that validated migrating an MVC monolith into an event-based cloud architecture, then joined the implementation team for the broader rollout that improved scalability and maintainability.
Tech: Python, AWS, Docker, Kubernetes, PostgreSQL

Education

Master of IT Architectures, IT Architectures
Universidad de Los Andes
2015–2017

Software Engineer, Software Engineering
Escuela Colombiana de Ingeniería
2008–2013
