Edward Jiménez M.

SENIOR SOFTWARE ENGINEER · CLOUD, BACKEND & AI AGENTS

eddy@eddyjim.com · in/eddyjim · gh/eddyjim · eddyjim.com · Bogotá, Colombia

Senior software engineer with 10+ years building cloud-native systems on AWS, now focused on AI engineering. Builds LLM agents, agent harnesses and RAG pipelines with LangChain, LangGraph and MCP, and instruments them with Langfuse for tracing and evaluation. Recent work includes an AI agent for insurance policy summarization, event-driven services and a state-machine billing engine, on top of a decade across BPM/SOA consulting, payments and platform migrations.

STACK

Languages Python · Java · JavaScript · TypeScript · Ruby · Bash · Scala

AI & LLM Tooling Claude / Claude Code · Cursor · Windsurf · OpenAI Codex · LangChain · Langfuse · RAG pipelines

Agent Engineering MCP server design · Multi-agent orchestration · LangGraph (state graphs) · Agent harness design · Spec-driven development

Backend Frameworks Flask · FastAPI · Starlette · Falcon · Express · Rails · Spring Boot · Apache Struts

Frontend Frameworks React · Vue · Angular · Astro · Bootstrap · Material

Databases PostgreSQL · MySQL · MongoDB · Oracle · SQL Server

DevOps & CI/CD Docker · Kubernetes · GitHub Actions · Jenkins · Terraform

Cloud (AWS) AWS Lambda · EC2 · ECS / Fargate · API Gateway · S3 · DynamoDB · Step Functions · CodeBuild · Kinesis · CloudWatch / X-Ray

Process & Integration BPMN process design · BPM implementation · SOA architecture · Bizagi · Apache Airflow · Orkes Conductor · Tray.io · Enterprise integration

Content Management CMS / ECM implementation · Content modelling · Content platform integration

Payments Stripe · Payment gateway integration · Billing systems

Tools Git · Figma · Postman · JIRA

EXPERIENCE

Fullstack Software Engineer

Jun 2022–Present

Team International — BriteCore (staff augmentation) · Remote

Staff augmentation engineer embedded with BriteCore, a SaaS platform for insurance policy management. Fullstack engineer building new product features — including AI agents — and operating cloud-native services on AWS as part of a US-based product team.

- Built an AI agent that produces summarized views of insurance policies, reducing the time end users spend on manual policy lookups
- Built the agent harness around it — tool definitions, context assembly, guardrails and retries — and RAG pipelines that ground responses in policy data
- Instrumented LLM calls and agent runs with Langfuse tracing and evaluation, making behaviour observable and regressions measurable
- Co-built a new state-machine-driven billing engine for the policy billing lifecycle
- Built an event producer that fans BriteCore domain events to internal and external event engines, enabling near-real-time downstream consumers
- Refactored legacy services and shipped new APIs across the BriteCore platform; upgraded internal tools from Python 2 to Python 3

Tech: Python · JavaScript · TypeScript · Vue · React · AWS · Docker · LangChain · Langfuse · RAG

Technical Lead

Feb 2020–Jun 2022

Blackboard · Remote

Technical lead of the Development and Relations teams. Owned the design and implementation of a new LTI service that decoupled functionality from the legacy monolith inside the Blackboard LMS.

- Designed and implemented a new serverless LTI service that decoupled functionality from the LMS monolith
- Migrated LMS integration to a serverless stack using AWS Cloud Services
- Built deployment pipelines for the new serverless infrastructure

Tech: Python · Java · Scala · JavaScript · Angular · React · AWS Lambda · API Gateway · DynamoDB · Step Functions · Docker

Senior Software Engineer

Jan 2018–Dec 2019

Alkanza · Bogotá, Colombia

Fullstack engineer on the research and development team. Built proofs-of-concept while contributing to the platform's monolith-split project — migrating a fintech MVC monolith to event-driven cloud architecture.

- Built the initial proof-of-concept that validated migrating to an event-driven cloud architecture
- Contributed to core services in the monolith-to-microservices rollout

Tech: Python · Java · AWS · Docker · Kubernetes · PostgreSQL

Software Architect
Mar 2016–Oct 2017

Banking Technologies Solutions S.A.S · Bogotá, Colombia

Software architect of a BPM implementation built on Bizagi. Owned the design of business processes and their integrations across enterprise banking systems.

- Established architectural patterns adopted across multiple projects

Tech: Bizagi · Java · Spring Boot · Oracle · SQL Server

Oracle EBS Solution Architect
Nov 2015–Mar 2016

Hardnetics LTDA · Bogotá, Colombia

Hired to define the architecture and technical design of an Oracle E-Business Suite implementation for a telecommunications company.

- Delivered architecture and design artifacts for the EBS implementation

Tech: Oracle EBS · Java · Oracle · SOA

Senior Consultant
Mar 2015–Nov 2015

Fussion Corporation SAS · Bogotá, Colombia

Senior consultant leading a content management (ECM) implementation and its integration with the client's ERP system.

- Delivered the ECM implementation and ERP integration on schedule

Tech: Java · JavaScript · Oracle · SQL Server

Functional / Technical Consultant
Jan 2013–Mar 2015

Soaint SAS · Bogotá, Colombia

Functional and technical consultant on government projects and engagements across multiple economic sectors.

- Successfully delivered multiple client projects across government and private sectors

Tech: Java · JavaScript · Oracle

PROJECTS

Insurance Policy AI Agent
Built an AI agent on the BriteCore SaaS platform that produces summarized views of insurance policies, reducing the time end users spend on manual policy lookups. Includes the agent harness, RAG retrieval over policy data and Langfuse tracing and evaluation.
Python · LLM · LangChain · RAG · Langfuse · AWS · FastAPI

Serverless LTI Integration
Migrated LMS integration to a serverless stack using AWS Cloud Services, including the deployment pipelines. Enabled scalable, cost-effective integration between learning management systems.
AWS Lambda · API Gateway · DynamoDB · Step Functions · Python

Monolith Split
Built the proof-of-concept that validated migrating an MVC monolith into an event-based cloud architecture, then joined the implementation team for the broader rollout that improved scalability and maintainability.
Python · AWS · Docker · Kubernetes · PostgreSQL

EDUCATION

Master of IT Architectures, IT Architectures — 2015–2017
Universidad de Los Andes · Focus on enterprise and cloud architecture patterns,Bogotá, Colombia

Software Engineer, Software Engineering — 2008–2013
Escuela Colombiana de Ingeniería · Bogotá, Colombia
