Cloud-native systems, end-to-end.

Summary

Senior software engineer with 10+ years building cloud-native systems on AWS. Currently at BriteCore (insurance SaaS) shipping event-driven services, a state-machine billing engine and an AI agent for policy summarization. Earlier: led the design and implementation of a serverless LTI service that decoupled the Blackboard LMS monolith, and built the PoC seeding an MVC monolith-to-microservices migration at Alkanza. Strong in Python and full-stack with Vue/React.

Tech Stack

Languages Python, Java, JavaScript, TypeScript, Ruby, Bash
Backend Flask, FastAPI, Starlette, Falcon, Express, Rails, Spring Boot
Frontend React, Vue, Angular, Astro, Bootstrap, Material
Databases PostgreSQL, MySQL, MongoDB, Oracle, SQL Server
DevOps / CI-CD Docker, Kubernetes, GitHub Actions, Jenkins, Terraform
Cloud (AWS) Lambda, API Gateway, S3, DynamoDB, Step Functions, CodeBuild, Kinesis, CloudWatch / X-Ray, Tray.io
Tools Git, Postman, JIRA, Figma, Bizagi

Experience

- Jun 2022 – **Fullstack Software Engineer, Team International (BriteCore — staff augmentation)**, Remote
Present Staff augmentation engineer embedded with BriteCore, a SaaS platform for insurance policy management. Fullstack engineer building new product features — including AI agents — and operating cloud-native services on AWS as part of a US-based product team.
- Built an AI agent that produces summarized views of insurance policies, reducing the time end users spend on manual policy lookups
 - Co-built a new state-machine-driven billing engine for the policy billing lifecycle
 - Built an event producer that fans BriteCore domain events to internal and external event engines, enabling near-real-time downstream consumers
 - Refactored legacy services and shipped new APIs across the BriteCore platform; upgraded internal tools from Python 2 to Python 3
- Tech: Python, JavaScript, TypeScript, Vue, React, AWS, Docker
- Feb 2020 – **Technical Lead, Blackboard**, Remote
Jun 2022 Technical lead of the Development and Relations teams. Owned the design and implementation of a new LTI service that decoupled functionality from the legacy monolith inside the Blackboard LMS.
- Designed and implemented a new serverless LTI service that decoupled functionality from the LMS monolith
 - Led the technical direction of the Development and Relations teams; ran design reviews and architectural decisions
 - Migrated the LMS integration to a serverless stack using AWS Lambda, API Gateway and Step Functions
 - Built deployment pipelines for the new serverless infrastructure
 - Mentored engineers and conducted code reviews
- Tech: Python, Java, Scala, JavaScript, Angular, React, AWS Lambda, API Gateway, DynamoDB, Step Functions, Docker

- Jan 2018 – **Senior Software Engineer**, *Alkanza*, Bogotá, Colombia
- Dec 2019 Fullstack engineer on the research and development team. Built proofs-of-concept while contributing to the platform's monolith-split project — migrating a fintech MVC monolith to event-driven cloud architecture.
- Built the initial proof-of-concept that validated migrating to an event-driven cloud architecture
 - Prototyped new product capabilities as part of the R&D team
 - Contributed to core services in the monolith-to-microservices rollout
 - Implemented API gateway and message-queue integrations
 - Participated in technical design sessions and architecture reviews
- Tech:* Python, Java, AWS, Docker, Kubernetes, PostgreSQL
- Mar 2016 – **Software Architect**, *Banking Technologies Solutions S.A.S*, Bogotá, Colombia
- Oct 2017 Software architect of a BPM implementation built on Bizagi. Owned the design of business processes and their integrations across enterprise banking systems.
- Designed BPM processes in Bizagi for enterprise banking workflows
 - Defined integrations between the BPM platform and surrounding banking systems
 - Created technical documentation and architecture diagrams
 - Established architectural patterns adopted across multiple projects
- Tech:* Bizagi, Java, Spring Boot, Oracle, SQL Server
- Nov 2015 – **Oracle EBS Solution Architect**, *Hardnetics LTDA*, Bogotá, Colombia
- Mar 2016 Hired to define the architecture and technical design of an Oracle E-Business Suite (EBS) implementation for a telecommunications company.
- Designed the architecture and technical approach for the Oracle EBS rollout
 - Defined integrations between the EBS modules and the client's surrounding systems
 - Produced architecture documentation and design decision records
- Tech:* Oracle EBS, Java, Oracle, SOA
- Mar 2015 – **Senior Consultant**, *Fussion Corporation SAS*, Bogotá, Colombia
- Nov 2015 Senior consultant leading a content management (ECM) implementation and its integration with the client's ERP system.
- Led the technical implementation of the ECM platform
 - Designed and built the ERP-to-ECM integration
 - Coordinated cross-system data flows and consistency rules
- Tech:* Java, JavaScript, Oracle, SQL Server
- Jan 2013 – **Functional / Technical Consultant**, *Soaint SAS*, Bogotá, Colombia
- Mar 2015 Functional and technical consultant on government projects and engagements across multiple economic sectors.
- Delivered functional analysis and technical implementation across client engagements
 - Worked on government-sector projects and private clients in diverse industries
 - Participated in requirements gathering and technical design
- Tech:* Java, JavaScript, Oracle

Education

- 2015 – 2017 **Master of IT Architectures**, *Universidad de Los Andes*, Bogotá, Colombia
Focus on enterprise and cloud architecture patterns
- 2008 – 2013 **Software Engineer**, *Escuela Colombiana de Ingeniería*, Bogotá, Colombia
